## Webappendix B: Details of hepatitis C and B modelling and data

### Text box

$$\frac{\text{Cumulative incidence due to IDU}}{\text{Cumulative incidence overall}}$$

$$= \frac{1 - \prod_{a=15}^{a=n} (1 - P_{ay} * R)}{1 - \prod_{a=15}^{a=n} (1 - I_{ay})}$$

Where:

$I$  = annual incidence rate of hepatitis B or hepatitis C

$a$  = age (15-84)

$y$  = year (1960-2013)

$P$  = prevalence of injecting drug use

$R$  = annual risk of sero-conversion for hepatitis C or hepatitis in people who inject drugs

Listed below are references of studies used to inform HBV and HCV modelling.

Interested readers are: able to consult the original sources that are listed in the appendix; can contact us for further detail if they would like clarification etc.; and more detail is available in the data visualisations (<http://www.healthdata.org/results/data-visualizations>) and GHDX (<http://ghdx.healthdata.org/>) sections of the IHME website.

## **HBsAg seroprevalence data by country**
